Septone Protecta Guard

Product Description

Protecta Guard is a silicone free, non-greasy, non-irritant barrier cream designed to protect the skin from dry powders and dusts, oils, greases and solvents.

Protecta Guard is insoluble in most petroleum-derived solvents so it will protect skin against most products containing these solvents such as paints, bitumen, greases, adhesives, oils and petrol. Protecta Guard is pH controlled for skin compatibility and its natural moisturizing provides super-fatting to the skin to help soften rough, scaly skin. With regular use this will also help protect against industrial dermatitis.

Directions For Use

Before work, apply a small amount of Protecta Guard to exposed skin on the hands. Rub the product in until dry. Ensure that the skin between the fingers and under the nails is covered. Re-apply if the cream is washed off or at least once every two hours. After work and before meals, wash hands with Protecta Wash or soap and water to remove the cream and any dirt or soils on the hands. With regular use Protecta Guard will help reduce build up of dirt/soils and hands will be easier to keep clean.
