Septone Protecta Plus

Product Description

Protecta Plus is a non-greasy, non-irritant barrier cream designed to protect the skin from water, moisture and from water-borne irritants. These irritants include acids, alkalis, electrolyte solutions and wet soils. Protecta Plus is highly water repellent, even after long periods of contact with water. Protecta Plus provides natural moisturising and superfatting to the skin and also helps prevent chafed, chapped, cracked and windburnt skin. Protecta Plus can provide temporary protection to minor cuts, scrapes and burns and is pH controlled to match skin to provide a higher degree of skin compatibility. It contains both highly refined Lanolin and Allantoin and with regular use will help provide enhanced long term protection against industrial dermatitis.

Directions For Use

Before work, apply a small amount of Protecta Plus to exposed skin on the hands. Rub the product in until dry. Ensure that the skin between the fingers and under the nails is covered. Re-apply if the cream is washed off or at least once every two hours. After work and before meals wash hands with Protecta Wash and water to remove the cream and any dirt or soils on the hands.
